

BUBBLE CHAIR FIXING INSTRUCTIONS

material needed:

metal chain with link size ca. 2x3cm / 0,8x1,1inch, 2 snap hooks for fixing the chain, screw hook for the roof and heavy duty plug (for fixing in concrete)

According to the instruction of the designer Eero Aarnio the bottom of the Bubble Chair should hang ca.20 cm / 6 inch over the floor ground to get a relaxing seat position.

Chain length = height of the room minus 140cm / 4,8 feet (for Bubble shell, snap hook, screw hook).

For the fixing the vertical carrying capacity should be up to 200 kg.

For the fixing in a wood beam a screw hook for wood is sufficient.

For the fixing in a concrete ceiling a heavy duty plug with minimum 10mm diameter and a screw hook are needed. Please, work exact when drilling the hole for the plug.

All needed material is available in common hardware stores.

PROPER WAY OF HANDLING THE BUBBLE CHAIR

knocks with peaked or other hard objects can split or make the acrylic porous. It can happen, that the material - even at a later date - tears or breaks.

Therefore, please, do not hang up the Bubble Chair too close to walls, other furniture or other objects, so that it will not touch them when swinging.

When installing two or more Bubble Chairs in one space they need a sufficient distance to each other.

Cleaning:

always use a soft sponge and/or cloth, water and dishwashing fluid.

Never use thinner or cleaning fluids which contain thinner !

Thank you very much for your attention.

We hope you enjoy our Bubble Chair.
