

## felt rocks

**felt rocks**

felt rocks are sculptural pieces, made of 100% pure wool, densely felted and solid all the way through. Each felt rock is unique in shape, having the familiar form of river rocks due to a similar tumbling action in their formation. After watching children and adults play with felt rocks, balancing, building and imagining...we realized that the material palate of "toys" is mostly plastic and almost always made into predetermined, realistic figures, animals, guns, cars...it seems there should be more room for imagination.
